

Project Title: Office and workshop Redevelopment, Dyce, Aberdeen
Client: Schlumberger EPS (UK) Ltd
Project Value: £1,250,000
Project Status: Construction works completed 2005

The clients' intention was to re-generate a redundant light industrial facility by upgrading, and extending the existing workshop building to create a new open plan office building for fifty personnel working in offices, workshops and laboratories.

The sloping nature of the site immediately suggested a cross section with split levels which resulted in a two storey building constructed half a level higher than the existing workshop, with a reception area linking the new and existing buildings together.

The existing buildings were converted to accommodate the industrial facilities required by Data Marine Services, such as satellite manufacturing and commissioning, with the new office accommodation a new-build structure with glazed curtain walling façade to the west.
