

Project Title: Campus Development, Westhill, Aberdeenshire
Client: Subsea7
Project Value: £25,000,000
Project Status: Construction works completed October 2008

Subsea 7's new building will enable the company to consolidate several sites across Aberdeen into a new campus-style building set in landscaped grounds to the west of the city. Organised around a naturally-ventilated atrium, the scheme consists of a series of wings, each of which contains one of Subsea 7's commercial or operational teams. The Building is organised around an internal street with two squares. The working areas are a series of wings leading onto the 'street'

Externally, the horizontal emphasis and transparency of the curtain wall and brises soleil contrasts with a series of solid rendered stairwells placed around the perimeter. Internally, the linear atrium allows daylight to penetrate deeply into the plan, and both open and glazed galleries will contribute to the building's light and airy feel. The completed building will house over 1,000 people.
